Preface

Almost 17 years have passed since Taïdo Kyohan was published in Japanese on November 26, 2004. I am very happy that during this period many people, both Taïdo lovers and practitioners of other martial arts, have used this text.

Thanks to the cooperation of project leader Amir Niknam and the translator Alvar Hugosson, this 3rd Volume — Other Hokei could be published. I am impressed and truly grateful for all the hard work that has been done to make this text available in English. I also want to thank the World Taïdo Federation for their support in making this possible.

Lastly, I am convinced that this text will be used overseas to deepen the understanding of Taïdo and for the further spread of this art. And as the author I am glad to be able to report to late Seiken Shukumine, the Saiko Shihan and founder of Taïdo, about this achievement.

Editorial Comments

British English has been chosen for the translation as most of the potential readers are from Europe, and also due to the fact that the translators and proofreaders are from either Europe or Australia.

The Hepburn transcription system for Japanese has been used throughout the book. Macrons (ō, ū) will be used to express long vowel sounds, but for words that have been generally adopted, e.g., Taïdo, Budo, Judo, Aikido, hokei, etc. a simple, not indicated, spelling will be used. As applicable, both Chinese reading and Japanese reading have been applied.

1 Seigyo — Principles for Overcoming and Applications

I Passive predominant way to defend

In the first volume we mentioned that there are five ways to be superior without being controlled. In Taido the active defense is based on avoiding attacks by changes of the body axis.

That requires that *unsoku* is used to be better positioned than the opponent and that the change of the body axis creates an advantage against the opponent. That is, as we think of “Taido as a martial art with leeway (*yoyū*)” when an opponent attack, if we have leeway, we will be able to defend ourselves by using *unsoku*. Moreover, with less leeway, by only using the change of the body axis one can still position oneself in a superior position.

However, when one does not have any leeway and is not able to position oneself in an advantageous position one must ward off oneself with hands and feet, with *uke*, *harai* or *tori*, etc. In this passive case of defense, it is still important to be in an advantageous position compared to one’s opponent.

II The precondition of using arms and legs

As hands and feet are used for kicks and punches in the decisive techniques, it might not be possible to dodge these thus it becomes necessary to fend off oneself using hands and feet in *uke* and *harai*, etc.

It is unnecessary to say that hands are used in hand techniques and feet are used in foot techniques for attacks and defense, but in offensive Taido techniques these are followed body movements.

Techniques used are mainly *seiken-zuki*, *nukite-sashi*, *shōtei-zuki*, *shutō-ate*, *uraken-uchi*, etc. but in *jissen* other parts can be used as well.

Common content for hand techniques are as follows.

1. THE IMPORTANCE OF HAND TECHNIQUES

Hand techniques utilizes the characteristics of the upper limbs and are defined by the methods used for attacking and defensive techniques. In Karate and other martial arts, hand techniques are the most common technique used for attacks and defense, and thus the various kinds of techniques are also very plentiful.

Generally, the techniques used in attacks, the so-called offensive techniques are “punches - *tsuki*”, “blows - *uchi*”, “sticks - *sashi*”, “hits - *ate*”, etc.

Defensive techniques, the so-called protecting techniques are “blocks - uke”, “sweeps - harai”, “stops - tome”, “grabs - tori”, etc.

These techniques are all-natural hand moves, for example, pushing, lifting luggage, pulling things, grabbing and holding down, brushing of bugs, things that we do daily. Adding power and speed to these moves, we make them into techniques.

Moreover, in order to practice hand techniques properly it is important to understand the close relation between movements, structure, functional capability, positions, etc., of the upper extremities. This will enable you to achieve full effect of the techniques.

For example, the movement of flexing and extending the arm and the speed of attack, forward backward and lateral movements of the arms and the strength of defensive moves. The relation of defensive moves and the flexion of the elbow. How to utilize the snappy movements of the wrist joint to increase the effect of techniques. That is, to apply the characteristic features of the upper extremities in techniques.

Another thing to pay attention to is that within the range in which the arm can reach with the shoulder as the center, there are many easily reachable vital points that can be attacked. Taking this into consideration, there are suitable positions to hold the upper extremities to defend these points.

Like this, it is important to understand that there are many characteristics for hand techniques, how to learn to use them in applied situation, and to utilize the wide range of the body for effective attacks and defense techniques.

2. CLASSIFICATION OF HAND TECHNIQUES AND THEIR MEANING

(1) CLASSIFICATION OF HAND TECHNIQUES

Generally, the purpose, method, movement and condition of the techniques are the base for classification. However, in Taido these are all regulated by the five body movements, and thus not suitable for a classification like punches, blows, hits, stabs, etc. Therefore, an offensive Taido technique that utilize the principle of attack and defense at once, can be classified as follows:

- | | | |
|-----------------------------------|---|--|
| 1) <i>Sentai zuki (uchi, ate)</i> | — | <ul style="list-style-type: none">1. <i>Sentai chokujō zuki</i>2. <i>Sentai tegatana/shutō uchi</i>3. <i>Sentai tetchū ate</i> (elbow technique)4. <i>Sentai gyakusen ate</i> (elbow technique) |
| 2) <i>Untai zuki</i> | — | <ul style="list-style-type: none">1. <i>Untai eji zuki</i>2. <i>Untai hien zuki</i> |
| 3) <i>Tentai zuki</i> | — | <ul style="list-style-type: none">1. <i>Tentai haizen/kō-ten zuki</i>2. <i>Tentai ude zen/kō-ten zuki</i>3. <i>Tentai chū zen/kō-ten zuki</i>4. <i>Tentai chū nenten zuki</i> |

* As for *Hentai* and *Nentai*, *tsuki* or *ate*, etc., developed from these movements could be created and become recognized as new techniques.

(2) GENERAL MEANING OF HAND TECHNIQUES USED FOR ATTACKS

1) TSUKI/-ZUKI (PUNCHING) TECHNIQUES

For *tsuki* (punching) techniques the left and right side of the chest (the position for *hikite*) or the front of the chest are used as starting points, and forward movement of the arm is used for spear like punching movements using fists (*seiken*) as in picture 1, knuckles (*oniken/kōken*) as in picture 2 as parts for attacking techniques.

2) UCHI (HAMMERING) TECHNIQUES

Uchi (hammering) techniques are mainly started from the left or right side of the head, or the left or right side of the chest. Moving the lower arm in a pendular movement, using *shutō/teगतana* as in picture 3, *minete* as in picture 4 as parts in hammer like blows for attacking techniques.

3) SASHI (STABBING) TECHNIQUES

Sashi (stabbing) techniques utilize mainly the left or right side of the chest, or the left or right upper shoulder part, or the front of the chest as starting points for the extension movement of the arm with *nukite* as in picture 5 or *kumade* as in picture 6 as parts for spear like stabbing attacks.

4) ATE (HITTING) TECHNIQUES

Ate (hitting) techniques are mainly started from the upper or lower part, or the left or right side of the head. Moving the lower arm in a pendular movement, using *kote* (forearm) as in picture 7, *empi* as in picture 8 as parts in bar or pole hitting attacks.

Picture 4 (Minete)

Picture 5 (Nukite)

Picture 6 (Kumade)

Picture 7 (Kote)

(3) GENERAL MEANING OF HAND TECHNIQUES USED FOR DEFENSE

1) UKE (BLOCKING) TECHNIQUES

Uke (blocking) techniques are mainly generated from the upper left or right shoulder part, left or right armpits, upper or lower part of the body, or left or right chest, using the pendular movement of the arm utilizing parts like *uchi kote* (inside of the forearm) as in picture 1, or *soto kote* (outside of the forearm) as in picture 2, in upwards, downwards, left or right blocks on the striking line to defend against opponent's attacks.

Picture 1 (Uchi kote)

Picture 2 (Soto Kote)

2) HARAI (SWEEPING) TECHNIQUES

Harai (sweeping) techniques are mainly generated from upper or lower part of the body or left or right chest, using the pendular movement of the arm utilizing parts like *hirate* (flat open hand) as in picture 3, or *shōtei* as in picture 4, in upwards, downwards, left or right sweeps on the striking line to defend against opponent's attacks.

Picture 3 (Hirate)

Picture 4 (Shōtei)

3) TOME (STOPPING) TECHNIQUES

Tome (stopping) techniques are mainly generated from left or right upper shoulder, left, right or front of the chest, using the forward movement of the arms utilizing parts like *oniken/kōken*, *koken/kotsui* as in picture 5, or *uraken* as in picture 6, to stop the opponent's attacks by a movement in the direct opposite direction of the attack.

Picture 5 (Koken/kotsui)

Picture 6 (Uraken)

4) TORI (GRABBING) TECHNIQUES

Tori (grabbing) techniques are mainly generated from upper or lower part of the body, left or right chest, or the left or right upper shoulder part using the pendular movement of the arm utilizing parts like *hirate* to grab the attacking arm from the left, right, above or below on the striking line to defend against opponent's attacks.

III The importance of blocking (*uke*) hand techniques

1. HAND TECHNIQUES DONE TOGETHER WITH UNSOKU

To block the opponent's attacks on the spot puts the focus of both the defender and the attacker on that spot. In Taido by using *unsoku* and *unshin* continuously to develop attacks and defending moves it is not necessary to make a block (*uke*) in the traditional way with arms and feet. However, when mutually controlling each other and there is no time to use changes of the body to defend an attack, it becomes necessary to use *uke* (blocks). In that case, it is important to practice each kind linked with *unsoku*.

For example, it is important to practice *uchi/soto uke* or *torite* linked with *kō-soku* or *ka-soku*, or *uchi/soto uke*, *torite uke*, *age uke* or *harai uke* linked with *tai-soku* or *gen-soku*, depending on the opponent's condition.

2. FIVE KINDS OF HAND TECHNIQUES AND PICTURES

Explanation:

The starting point, or the point the move is generated from, is the place where the hand movement in attacking or defending moves starts from. Left or right side of the chest is the area around the place for the *hiki-te*, the front of the chest is the area in front of the sternum, left or right side of the head (upper part) is the area besides the left or right ear, on top of the left or right shoulder is the area one put the hand on top of the shoulder where *honte* is placed when doing *kamae* (Volume 1, p. 93), and left or right axilla is the area of the armpit.

(4) JŌDAN AGE UKE

Together with various *unsoku* (picture shows position after *tai-soku* is done) against an opponent's attack against the head — upper chest, as in picture 1, while pushing forward the right *soe-te*, pull the left hand back

to the position of *hiki-te*, and from there generate the move by pulling the stretched right *soe-te* back to the position of *hiki-te*, while you use the left arm in a pendulum move, and as in picture 2, use the *hidari uchi-kote* (inside of the left forearm) by raising it upwards to block the striking attack.

Picture 1

Picture 2

(5) CHŪDAN SOTO UKE

Together with various *unsoku* (picture shows position after *tai-soku* is done) against an opponent's attack against the mid body, as in picture 1, while pushing forward the right *soe-te*, stick the opposite left hand under the right armpit (the axilla) palm of the hand facing down, and from there generate the move while pulling the stretched *soe-te* back to the position of *hiki-te*, while you use the left arm in a pendulum move, and as in picture 2, use the *hidari soto-kote* (outside of the left forearm) by sweeping it outwards to the left to block the striking attack.

Picture 1

Picture 2

(6) CHŪDAN UCHI UKE

Together with various *unsoku* (picture shows position after *tai-soku* is done) against an opponent's attack against the mid body, as in picture 1, while pushing forward the left *soe-te*, pull the right hand back to a position outside the head (besides the ear), and from there generate the move while pulling the stretched *soe-te* back to the position of *hiki-te*, at the same time as you use the right arm in a pendulum move, and as in picture 2, use the right *uchi-kote* sweeping it inwards to sweep/block the striking attack.

Picture 1

Picture 2

(7) CHŪDAN TORITE UKE

Together with various *unsoku* (picture shows position after *tai-soku* is done) against an opponent's attack against the mid body, as in picture 1, while pushing forward the left *soe-te*, pull the right hand back to a position on top of the left shoulder (as done when doing a *ge-* or *chūdan gamae*), and from there generate the move while pulling the stretched *soe-te* back to the position of *hiki-te*, at the same time use the right arm in a pendulum move, as in picture 2, use the right *hirate* sweeping it outwards to grab and hold the striking attack.

Picture 1

Picture 2

(8) GEDAN-BARAI UKE

Together with various *unsoku* (picture shows position after *tai-soku* is done) against an opponent's kicking or striking attack against the lower body, as in picture 1, while pushing forward the left *soe-te*, pull the right hand back to a position on top of the left shoulder (as done when doing a *ge-* or *chūdan gamae*), and from there generate the move while pulling the stretched *soe-te* back to the position of *hiki-te*, at the same time use the right arm in a pendulum move, as in picture 2, sweep the right *hirate* down and outwards to block the attack.

2 Tensei no Hokei

1. STRUCTURE AND CONTENTS OF HOKEI

Tensei no Hokei is one of the three (3) “-sei” hokei; *Ten*, *Chi*, and *Jin*. Its structure and content are as follows.

- (1) The timing of attack mainly practiced in this hokei is *go no sen*, but also *sen no sen* (Volume 1, Chapter 21).
- (2) “*Ten*” (heaven) refers technically to “hand techniques” and includes defense against hand techniques in the form of the Five Forms of Hand Blocks (*Uke go tai*): *Chūdan soto-uke*, *Chūdan uchi-uke*, *Chūdan torite-uke*, *Gedan harai-uke*, *Jōdan age-uke* which are used in this hokei.

2. SEQUENCE AND MOVEMENTS

IV The importance of foot/leg techniques (kicks)

1. FOOT/LEG TECHNIQUES FOR DEFENSE

Kicking techniques can be classified in kicks from or towards the front, side, oblique or slanted, back, and midair. This classification is based on the direction of the kick, the leg, but just kicking in that direction is not sufficient.

For a decisive kick the opponent's condition has to be considered, and in Taïdo a kick has to be done after doing *unsoku* and *sōtai* (how to change the body axis) in a continuous move.

For example, in the *sen*-technique group, *sentai shajō-geri* or *kaijō-geri* kicks are done with the body spinning like a top and while letting the upper body fall to avoid getting hit. That is, kicking technique with attack and defense at once. Of course, for *kaijō-geri* to protect the head and the lower body both hands are necessary for protection.

For the *un*-technique group, in *untai shōmen-geri* defense is performed with the hand and leg, *sansetsu-ittai* (three joints combined), and with the body changing up and down, attack and defense are done at once. Of course, also for the *hien-geri* group it is important to use the hand(s) to protect the upper and/or lower body depending on the state of the technique.

In the *hen*-technique group, for *hentai ebi-geri*, *manji-geri* and *suihei-geri*, etc., by letting the body fall like a tree, the kick is done combining attack and defense.

In the *nen*-technique group, for *nentai hangetsu-ate* or *shajō-geri*, etc., by changing the body in a swirling move attack and defense are done at once.

In the *ten*-technique group, for each kicking technique, by making the body tumble attack and defense are done at once.

Foot techniques can also be classified depending on the part of the foot that is used in the kick: *koshi* (ball of the foot), *sokutō* (outer edge of the foot), *hokosaki* (spearhead, toe tip), *sokkō* (foot instep) or *enshō* (heel), etc. However, for kicks in Taïdo the classification is based on the five body movements during which the kick is performed.

2. FIVE KINDS OF FOOT TECHNIQUES

The names within parentheses () are the names of the part of the foot mainly used for that technique.

3 Chisei no hokei

1. STRUCTURE AND CONTENTS OF HOKEI

Chisei no Hokei is one of the three (3) “-sei” hokei; *Ten*, *Chi*, and *Jin*. Its structure and content is as follows.

- (1) The timing of attack mainly practiced in this hokei is *go no sen*, but also *sen no sen* (Volume 1, Chapter 21).
- (2) “*Chi*” (earth) refers technically to “Foot/leg techniques” and includes defense against foot techniques in the form of the Five Forms of Blocks of Foot Techniques (*Uke Go Tai* for foot techniques): *Jōdan morote-hasami-tome-uke*, *Gedan motote-osae-tome-uke*, *Shōtei-harai-uchi-uke*, *Uraken tome-uke*, and *Senagashi-uke* which are used in this hokei.

2. SEQUENCE AND MOVEMENTS

East is where you are facing when starting a hokei.

- (1) EAST: Stand in *heisoku-dachi* on *kidō-ten* [Picture 1]. Sit in *seiza* in a set manner [Picture 2]. Sitting facing east.

V The importance of elbow techniques (ate)

Elbow techniques utilize the characteristics of the elbow joint and are used for attacking and defensive techniques. Most of the elbow techniques are therefore attacks, and elbows are seldom used for defensive techniques. However, from the range of motion and the form of the elbow, a close distance to the opponent is necessary and elbow techniques are often used as counter attacks.

To use these kinds of elbow techniques effectively strike the opponent's opening as with a dagger, and use the distance to achieve highest possible effect.

Elbow techniques used for attacks are called "Ate", and the main techniques are *Mae-age-ate* (front), *Yoko/soto-ate* (sideways), *Mawashi-ate* (spinning), *Ushiro-ate* (back), *Shita-ate* (down), etc.

These "ate" applies similar pendular moves that we use in our daily life. For example, when running, when scratching one's back, when opening a collar, when tightening a belt, etc. By adding speed and power to these moves, bending the elbow and raising it fast, pull it strongly backwards, and by time you will be able to use them as effective techniques.

In short, the elbow techniques are what is known as an elbow blow that has rationally been developed into a technique. When receiving an invitation or a challenge, no matter how weak a person, just using the elbow instinctively the move of the elbow can be used as a technique.

Although the elbow is used daily, it is surprisingly hard to apply it as a technique. However, if it could be applied as a technique, especially when getting very close, the technique can hit a weak target point without the opponent being able to see it coming.

That is, as the arm from the shoulder to the elbow can be moved even in close ranges this suits attacking an opponent at a close range. Moreover, as the movement is very small it is suitable for surprising blows.

1. ELBOW TECHNIQUES FROM SEN-MOVEMENTS

Elbow techniques have great effect in close combat, but by rotating the body, the range of the movement can be made larger and the power generated is not inferior to hand or foot techniques. Moreover, when you are running away from a chasing opponent, while sinking down, instantaneously using an elbow technique can strike a deadly defensive blow and is one of the most powerful ways to use elbow techniques.

2. FIVE KINDS OF ELBOW TECHNIQUES AND PICTURES

Using the direction of the elbow's movement, techniques can be classified in five categories: forward, sideways, backward, downward and turning ate. And by adding the relation to the body, *jun* (normal) and *gyaku* (reversed) conditions arise. However, in Taido elbow techniques are classified into five "ate" in correspondence to the stance.

(1) MAE-AGE-ATE (FORWARD)

Mae-age-ate is performed while getting into *oji-dachi* [Picture 2] or into

mae-ashi-dachi [Picture 3], and the starting point is mainly when the upper arm is parallel with the body or slightly behind it. From there while the arm is raised forward and up in a pendular movement, the elbow is bent and used for attacking.

Picture 1

Picture 2
(Untai eji-dachi mae-age-ate)

Picture 3
(Mae-ashi-dachi mae-age-ate)

(2) YOKO-ATE (TO THE SIDE)

Yoko-ate is done by moving around the front (or rear) foot and while getting into *fudō-dachi* [Picture 2] or into *ryūnen-dachi* [Picture 3], start with the upper arm horizontally in front of the chest, bend the arm, and at the same time moving it sideways (outwards) in a pendular movement use the elbow for attacking.

Picture 1

Picture 2
(Fudō-dachi yoko-ate)

Picture 3
(Ryūnen-dachi yoko-ate)

(3) USHIRO-ATE (BACKWARD)

Ushiro-ate is done by pulling the forward foot back getting into *uji-dachi* [Picture 1] and [Picture 2] or by turning into *fudō-dachi* [Picture 3], at the same time start with the upper arm parallel with or in front of the body, bend the arm, and stick the elbow backwards for attacking.

Picture 1

Picture 2

Picture 3
(Sentai gyakusen-ate)

(4) MAWASHI-ATE (ROTATING)

Mawashi-ate is done by turning and while getting into *oji-dachi* [Picture 1] and [Picture 2] or while taking a step forward with into *fudō-dachi* [Picture 3], start with the upper arm parallel with or behind the body, bend the arm, turn it to the side and simultaneously, utilizing the rotating movement of the elbow to attack from the side.

Picture 1

Picture 2
(Eji-dachi mawashi-ate)

Picture 3
(Sentai gyakusen-ate)

(5) SHITA-ATE (DOWNWARD)

Shita-ate is done by taking a step (or jumping) forward into *fudō-dachi*, and at the same time, raise the arm above the shoulder and from there bend the arm, and pull it down. At the same time, use the pendular movement of the elbow to attack downward from above.

Picture 1

3. GOHŌ-ATE (FIVE KINDS OF ATE) PRACTICE

(1) GOHŌ-ATE AT THE SPOT

At the spot, standing in *heikō-dachi*. Using *fusegi-te*, do while counting “*ichi*” (1) do *mae-age-ate* [Picture 1], counting “*ni*” (2) do *yoko-ate* [Picture 2], counting “*san*” (3) do *mawashi-ate* [Picture 3], counting “*shi*” (4) do *ushiro-ate* [Picture 4], counting “*go*” (5) do *shita-ate*. Do it both on left and right side. When getting used to each movement, do them in a row, gradually increasing the speed. For each *hiji-gi*, practice how to use *osae-te* (blocking hand), *soe-te* and the wrist.

(2) GOHŌ-ATE — BASIC TRAINING

From *hidari chūdan-gamae*, keeping the right foot on the *kidō-ten*, perform each ate in four directions.

On the count of “*ichi*”, take a step forward (east) with the right foot, while getting into *migi eji-dachi*, do *migi hiji jun-mae-age-ate* [Picture 1]. On the count of “*ni*”, pull the right foot back to the left foot and then take a step to the right (south), and while getting into *fudō-dachi*, do *migi yoko-ate* [Picture 2]. On the count of “*san*”, move the right leg to the left turning the body while getting into *fudō-dachi*, do *migi mawashi-ate* [Picture 3].

On the count of “*shi*”, pull the right leg back to the left and then take a step back. While getting into *hidari eji-dachi*, do *migi ushiro-ate* [Picture 4]. On the count of “*go*”, take a step forward with the right foot. While turning the body getting into *fudō-dachi*, do *migi shita-ate* [Picture 5]. Do this four (4) times with the right foot and then switch sides and do another four times. As you get comfortable with the moves, do them in one flow and gradually increase the speed.

4 Jinsei no hokei

1. STRUCTURE AND CONTENTS OF HOKEI

Jinsei no Hokei is one of the three (3) “-sei” hokei; *Ten*, *Chi*, and *Jin*. Its structure and content is as follows.

- (1) The timing of attack mainly practiced in this hokei is *go no sen*, but also *sen no sen* (Volume 1, Chapter 21).
- (2) “*Jin*” technically refers to *hiji-gi* (elbow blows), the five *hiji-gi* (*gohō-ate*): *mae-age-ate*, *yoko-ate*, *mawashi-ate*, *ushiro-ate* and *shita-ate*. And the hokei is composed of these and how to use them to control the opponent(s).

2. SEQUENCE AND MOVEMENTS

- (1) EAST: Stand in *heisoku-dachi* on *kidō-ten* [Picture 1]. Sit in *seiza* in a set manner [Picture 2]. Sitting facing east.
- (2) EAST: Follow the set manner to do *zarei* [Picture 3].

5 Sei-i no Hokei

1. STRUCTURE AND CONTENTS OF HOKEI

Sei-i no hokei is based on *go-no-sen*, with elements of *sen-no-sen* incorporated. Included are *uke* used against hand techniques, just as in *Tensei no hokei*, *uke* against foot techniques, just as in *Chisei no hokei*, and elbow techniques as in *Jinsei no hokei*.

Sei-i no hokei was created by Genzaburo Takamichi in cooperation with the Hanshi-kai, to be presented at the 7th anniversary of Seiken Shukumine Saiko Shihan's death at the 41st All Japan Championship, November 18, 2007.

The "i" in *sei-i* means rank or level, reflecting the high level that is practiced in this compilation of *Ten-Chi-Jin* hokeis.

New techniques with *go-no-sen* timing introduced in this hokei are *Hentai keri-kuzushi*, *Sōshu nagashi-uke*, *Shōtei age-uke*.

2. SEQUENCE AND MOVEMENTS

- (1) EAST: Stand in *heisoku-dachi* on *kidō-ten* [Picture 1].
- (2) EAST: Follow the set manner to do *seiza* [Picture 2]. Sitting facing east.
- (3) EAST: Follow the set manner to do *zarei* [Picture 3].

6 Taiki <Methods for Breathing> and usage

I Continuous predominate ways to move

Taiki <Methods for breathing> are the methods to adjust inhalation and exhalation to get the best effect possible in the techniques. That is, the longer one can move is connected to a continuous predominate way to move, but to do that one needs stamina. This means that even if one is technically superior, without enough stamina to continue moving, one will not be able to defeat the opponent.

How much power one has left for the final decisive technique depends on how one can adjust one's breathing during techniques and moves. And this is the biggest challenge in *Taiki*. In order to be able to move continuously, aerobic capacity and stamina are necessary. And to generate power, ability to withstand high exercise load and concentration are important. One method to train all these four skills is *Taiki kyūhō* (nine breathing methods). And these are designed to facilitate the changes of the body axis when training.

II The precondition of the body axis and its adaptation

Breathing methods in Taïdo use the periodicity of the physiology and practice how to regulate it. The visible (outer) effect are all the skills necessary for effectively develop techniques, but also invisible (inner) effects such as improving the respiratory and circulatory functions, digestion, and mental functions are all practiced.

One prerequisite for training is to change the angle of the body (changes of the body axis) in 90 (vertical), 45, 180 (horizontal), and -45 degrees angles. In order to keep these angles accurately (*seitai no hoji* [to retain a good posture]) the points of where one should focus *ki*, how one should move *ki*, how one generates *ki* are very important. By practicing the how to utilize *Taiki kyūhō*, one can practice how to use *ki*, and learn how the *ki* flows.

III The flow of *Ki* and *Taiki Kyūhō*

The flow of *ki* and *Taiki kyūhō* are described in the next section; how to practice *Seimei no Hokei* (Breathing physiology). However, the fundamentals for all breathing techniques is “normal breathing”. In normal breathing there are four different ways to inhale and exhale: long inhalation and long exhalation [*chōkyū chōto*], long inhalation and short exhalation [*chōkyū tanto*], short inhalation and long exhalation [*tankyū chōto*], short inhalation and short exhalation [*tankyū tanto*] which need to be practiced thoroughly.

Moreover, it is also important to practice moving in an exhaled state [*muki yūtai*], and in an inhaled state [*yūki mutai*]. The next explains how these breathing methods are combined when practicing *kamae* and *unsoku*, etc.

1. BASIC BREATHING TRAINING

Breathing methods in martial arts are not just inhaling and exhaling. It is important to breath consciously. Normal breathing is done automatically or unconsciously and we seldom think very much about our daily breathing.

However, in martial arts to consciously practice one's breathing, rational methods have been developed. Inhalation is done through the nose and exhalation through the mouth. During these the use of the tongue subtly influences the effect. The tongue is normally, if studied, in a relaxed state rounded at the bottom of the mouth (inside the jawbone).

When inhaling the tongue press lightly on the upper jawbone [Illustration 1], while air is inhaled through the nose. When exhaling, the tongue disengages from the upper jawbone [Illustration 2] and air is exhaled through the opening in the mouth. At this time, the upper and lower lips, as well as upper and lower teeth are separated a little.

The inhaled air is moved from the chest (*danchū*) to the lower abdomen (*tanden*) and the back to *danchū* and exhaled. This is called abdominal respiration. This is shown in Picture 1 - *Heisoku-dachi*, Picture 2 - *Fudō-dachi* and Picture 3 - *Seiza*. Basically, you do this by putting your hands on your belly (*tanden*) to feel the flow of *ki* (how air moves when breathing).

(1) TRAINING NORMAL BREATHING DOING THREE KINDS OF KAMAE

At the spot, while doing *gedan-gamae* (or *chūdan*, or *jōdan*), continue breathing normally while doing *ten-soku*. On 1 (*ichi*) stretch out *soe-te* and put *hon-te* on the shoulder while breathing in normally, on 2 (*ni-i*) while positioning your hands in *kamae*, exhale.

(2) TRAINING LONG INHALATION AND LONG EXHALATION DOING THREE KINDS OF KAMAE

As in (1), on spot while doing *gedan-gamae* (or *chūdan*, or *jōdan*), continuously do a long inhalation and exhalation while doing *ten-soku*. On 1 (*i-chi*) stretch out *soe-te* and put *hon-te* on the shoulder while making a long inhalation, on 2 (*ni-i*) while positioning your hands in *kamae*, make a long exhalation.

(3) TRAINING LONG INHALATION AND SHORT EXHALATION DOING THREE KINDS OF KAMAE

As in (2), on spot while doing *gedan-gamae* (or *chūdan*, or *jōdan*), continuously do long inhalation and short exhalation while doing *ten-soku*. On 1 (*i-chi*) stretch out *soe-te* and put *hon-te* on the shoulder while making a long inhalation, on 2 (*ni!*) while positioning your hands in *kamae*, make a short (quick) exhalation.

(4) TRAINING SHORT INHALATION AND LONG EXHALATION DOING THREE KINDS OF KAMAE

As in (3), on spot while doing *gedan-gamae* (or *chūdan*, or *jōdan*), continuously do short inhalation and long exhalation while doing *ten-soku*. On 1 (*ichi*) stretch out *soe-te* and put *hon-te* on the shoulder while making a short inhalation, on 2 (*ni-i*) while positioning your hands in *kamae*, make a long exhalation.

(5) TRAINING SHORT INHALATION AND SHORT EXHALATION DOING THREE KINDS OF KAMAE

As in (4), on spot while doing *gedan-gamae* (or *chūdan*, or *jōdan*), continuously do short inhalation and short exhalation while doing *ten-soku*. On 1 (*ichi*) stretch out *soe-te* and put *hon-te* on the shoulder while making a short inhalation, on 2 (*ni!*) while positioning your hands in *kamae*, make a short exhalation.

(6) TRAINING YŪKI-MUTAI DOING KAMAE, UNSOKU HAPPŌ
(UNSOKU GORENDŌ), ETC.

At the spot, while doing *gedan-gamae* (or *chūdan*, or *jōdan*), or *unsoku-happō* (*unsoku gorendō*), basic hentai movements (*ōhen-fūbi*), repeat practicing *yūki-mutai*.

1. When doing *kamae*, inhale fully, exhale about 20% and while holding your breath, on the count of 1 (*ichi*) do five consecutive *ten-soku*, and exhale on the fifth time. As you get used to it, increase the number of steps done on one breath.
2. When doing *unsoku happō* (*unsoku gorendō*), inhale fully, exhale about 20% and while holding your breath, on the call *Hajime!* (start), do *unsoku happō*, and exhale on the last step. As you get used to it, continue both sides.
3. When doing *ōhen-fūbi*, inhale fully, exhale about 20% and while holding your breath, on the call *Hajime!*, do *ōhen-fūbi*, left-right-front-back and when returning to starting position exhale. When getting used to it, see how many sets you can do on one breath. The exercise of moving and supporting your body will increase your exercise load capacity.

(7) TRAINING MUKI-YŪTAI DOING KAMAE, UNSOKU HAPPŌ
(UNSOKU GORENDŌ), ETC.

At the spot, while doing *gedan-gamae* (or *chūdan*, or *jōdan*), or *unsoku happō* (*unsoku gorendō*), basic hentai movements (*ōhen-fūbi*), repeat practicing *muki-yūtai*.

1. When doing *kamae*, exhale fully and while holding your breath, on the count of “1 (*ichi*)” do 5 consecutive *ten-soku*, and inhale on the fifth time. As you get used to it, increase the number of steps done on one breath.
2. When doing *unsoku happō* (*unsoku gorendō*), exhale fully and while holding your breath, on the call *Hajime!*, do *unsoku happō*, and inhale on the last step. As you get used to it, continue both sides.
3. When doing *ōhen-fūbi*, first inhale fully and then exhale fully. While holding your breath, on the call *Hajime!*, do *ōhen-fūbi*, left-right-front-back and when returning to starting position inhale. When getting used to it, see how many sets you can do on one breath. The exercise of moving and supporting your body will increase your exercise load capacity.

2. PRACTICING *TAIKI KYŪHŌ* (NINE BREATHING METHODS)

1. *Yūki-mutai*
Practice while doing *kamae*, *unsoku happō* (*unsoku gorendō*) or *ōhen-fūbi*, do as in 1. (6).
2. *Muki-yūtai*
Practice while doing *kamae*, *unsoku happō* (*unsoku gorendō*) or *ōhen-fūbi*, do as in 1. (7).
3. *Taiki-getan*
Mainly practiced in *-mei hokei*, but also practice in each hokei and each technique.
4. *Taiki-chūtan*
Mainly practiced in *-mei hokei*, but also practice in each hokei and each technique.
5. *Taiki-jōtan*
Mainly practiced in *-mei hokei*, but also practice in each hokei and each technique.
6. *Danki-tanun*
Mainly practiced in *-mei hokei*, but also practice in each hokei and each technique.
7. *Tanki-danun*
Mainly practiced in *-mei hokei*, but also practice in each hokei and each technique.
8. *Kyūki-shūhō*
Mainly practiced in *-mei hokei*, but also practice in each hokei and each technique.
9. *Kyūki-haibatsu*
Mainly practiced in *-mei hokei*, but also in each hokei and *unso-ku happō* (*tai-soku* = *gen-tai*), and with each techniques.

7 Seimei no hokei

1. STRUCTURE AND CONTENTS OF HOKEI

Seimei no hokei is one of the three (3) -*mei hokei*: *Sei-mei*, *Katsu-mei*, and *En-mei*. Its structure and content are as follows.

1. This hokei is called “Breathing physiology” and incorporate the nine breathing methods of Taido - *Taiki kyūhō*. And to practice it, use the change of body axis to learn how *ki* flows in your body. The first half consists of 48 moves and takes 2 minutes 30 seconds, the second half also consists of 48 moves and takes 2 minutes 30 seconds, a total of 96 moves taking 5 minutes.
2. By consciously minding you breathing, you will develop your breathing capacity (muscles, volume, etc.) and your circulatory capacity (heart capacity, increased aerobic capacity) will increase, also increasing your maximum oxygen uptake capacity and maximal oxygen debt capacity. Moreover, the pressure on the abdominal muscles or the intestines helps intestinal regulation and improve the digestion and egestion functions. This will further your metabolism and will make your daily life and movements easier. And while you increase your stamina and endurance, you will prevent high blood pressure and other life-style related diseases.
3. In this hokei, the different stances and poses, and in the moves, of course the muscles in the legs and arms, muscles used for breathing (chest and abdominal pressure), core muscles used to hold your pose, and ability to move instantaneously are all increased. Moreover, the flexibility in hip, knees, wrists, ankle, shoulder, neck and other joints will increase, body balance and coordination will also increase.
4. Physiology (*seitai*) refers to put the body in order. Of course, the core, but also the form of the body, hands and arms, i.e., outer appearance, but also the function of inner organs and their work is regulated, i.e., inner effects. This is done by experience one’s own flow of *Ki*, increasing concentration capacity by the outer effects of the techniques, but also mental capacities like calmness, cogitation, judgment, etc., will help increase the concentration capacity. Moreover, the ability to concentrate in general life (work, school, free time, etc.) will increase, and it will help reduce your stress.

2. SEQUENCE AND MOVEMENTS

East is where you are facing when starting a hokei.

- (1) EAST: Stand in *heisoku-dachi* on *kidō-ten* [Illustration (1)]. Sit in *seiza* in a set manner [Ill. (2), (3), (4)]. Sitting facing east.

- (2) EAST: Follow the set manner to do *zarei* [Ill. (5)].

- (3) EAST: On the count of 1 breathe normally and then exhale completely and hold. [*Muki yūtai*] As you exhale, draw the diaphragm upwards as in [Ill. 1] so that the lower abdomen becomes concave. Then quickly push it forward again (to normal position) without breathing.
- (4) EAST: On the count of 2, while keep holding your breath (same state as in 1), move the left leg forward as in [Ill. 2]. While rising to *ejī-dachi* move your right hand slowly forward to a horizontal position.
- (5) EAST: While holding your breath (same state as in 1 [*Muki yūtai*]), move the right hand to the centreline, and at the same time move the left hand up to the centre position shown in [Ill. 3], the knuckle of the left hand's middle finger should lightly touch the hollow of the right hand.

2

3

- (6) EAST: From the same position and state, on the count of 4, during a slow inhalation pull in both hands to the position shown in [Ill. 4] [*yūki mutai*].
- (7) EAST: After completing the inhalation, hold your breath [*yūki mutai*], on the count of 5, turn around on the spot to the right (west), and stretch both hands slowly (as in [Ill. 5]) upwards 45 degrees while opening your hands. Body facing west in *migi* (right) *ejī-dachi* with the left hand over the right hand.
- (8) WEST: Continue holding the breath, on the count of 6, slowly raise your hands vertically over your head as in [Ill. 6].

(Profile)

- (9) WEST: From the same position and state, on the count of 7, exhale slowly, and at the same time lower your hands to a horizontal position as in [Ill. 7].
- (10) WEST: On the count of 8, inhale quickly, and at the same time, turn

around to the left (east), simultaneously putting your left hand on the right shoulder and stretching your right hand forward as *soe-te*, as in [Ill. 8]. The body facing east in *hidari eji-dachi*.

- (11) EAST: On the count of 9, during a short exhale (as in [Ill. 9]) take the position of left *gedan-gamae*. The body facing forward (east) in *hidari eji-dachi*, right hand as *hikite*.
- (12) EAST: On the count of 10, while inhaling slowly, move your left hand to the side and stand up putting your right foot beside your left as shown in [Ill. 10]. The body facing forward (east) in *heisoku-dachi*, both hands as *hikite*. Breathe normally. (Elapsed time: 30 sec)

- (13) EAST: On the count of 11, during inhalation take a step to the right side with the right leg. Then let your left leg pass behind the right and take the position of *ryūnen-dachi* as in [Ill. 11]. Clench the toes of the left foot together. The body facing south in *ryūnen-dachi*, left hand as *hikite*.
- (14) SOUTH: On the count of 12, While holding your breath standing in this position, pull the left hand back to *hikite* position. Then turn around and, at the same time, slowly stretch out both hands as in [Ill. 12], while opening them up, but keep fingers together. The body facing south in *oji-dachi*, left hand downwards 45 degrees, right hand upwards 45 degrees. Still in [*yūki mutai*] state.
- (15) SOUTH: On the count of 13, in the same position switch the hands' position as in [Ill. 13]. The width between the hands shoulder width, and hands moving in a semicircle. Still in [*yūki mutai*] state.
- (16) SOUTH: On the count of 14, exhale while you bend your arms in a right angle, with the left hand in the palm of the right hand as in [Ill. 14]. Breath in and hold the breath.

- (17) SOUTH: On the count of 15, in the same position hold your breath, while moving the inhaled air down to *ge-tanbu* (*tanden* = lower

abdomen), move both hands diagonally down forward, and let the body fall forward as in [Ill. 15] to 45 degrees. [Taiki *getan*] (*Danki tanun*)

- (18) SOUTH: On the count of 16, in the same position, move the *ki* that you earlier moved to *ge-tanbu* to *chū-tanbu* (*danchū* = region of the chest) while putting both palms on the floor and let the body fall further forward as in [Ill. 16] to 90 degrees. [Taiki *chūtan*] (*Tanki danun*)

- (19) SOUTH: On the count of 17, move the *ki* back from *chū-tanbu* to *ge-tanbu* while you move your body back to the same state as in [Ill. 15], according to [Ill. 17]. [Taiki *getan*] (*Danki tanun*)

15

16

17

- (20) SOUTH: On the count of 18, from the same position and state, hold the breath, while moving the left foot a step back (to the north on *kidō-sen*) simultaneously put your right hand on the left shoulder and stretch forward your left hand as *soe-te* as in [Ill. 18]. The body facing south in *migi eji-dachi*.

- (21) SOUTH: On the count of 19, in the same position during short exhalation take the position of *migi gedan-gamae* as in [Ill. 19]. The body facing south in *migi eji-dachi*, left hand as *hikite*.

- (22) SOUTH: On the count of 20, from the same position and state, during slow inhalation, look left (east), pull the right hand into the position of *hikite*, while moving the right foot to the side of the left into *heisoku-dachi* as in [Ill. 20]. Breathe normally. The body facing east in *heisoku-dachi*, both hands as *hikite*. (Elapsed time: 1 min)

18

19 Exhalation

20 Inhalation

(23) EAST: On the count of 21 to 30, do as you did in step 13 to 22, [Ill. 21 to 30] on the opposite side. (Elapsed time: 1 min 30 sec)

(24) EAST: On the count of 31, from the same position and state, during short inhalation move the right foot forward, turn on the left foot backwards (west) and take the position of *hidari* (left) *aji-dachi* while breathing in quickly [*tankyū*]. Simultaneously put your left hand on the right shoulder and stretch your right hand forward as *soe-te* as [Ill. 31]. The body facing west in *hidari aji-dachi*.

(25) WEST: On the count of 32, during a long exhalation [*chōto*] take (as in [Ill. 32]) the position of *hidari gedan-gamae*. Right hand as *hikite*.

(26) WEST: From the same position and state pull in the left hand

to the position for *hikite*. Simultaneously move the right foot forward one step into *migi eji-dachi*. During *Ki-ai* (exhaling 70% of inhaled air) concentrate the energy (*Ki*) of the whole body and punch with left hand diagonally downward and with the right hand diagonally upward as in [Ill. 33]. Both hands on the centreline. The body facing west in *migi eji-dachi*. (*Kyūki-shūhō*)

(27) WEST: On the count of 34, from the same position and state pull in both hands to the position for *hikite*, and while exhaling another 20% of the air (10% remaining) move the left foot forward one step and follow with the right foot, take the position of *heisoku-dachi* as in [Ill. 34]. During this move punch forward with both hands. Support the right fist with the open left hand on top. The body facing west in *heisoku-dachi*. (*Kyūki-shūhō*)

(28) WEST: On the count of 35, in the same position, during a large inhalation, move both hands up to a vertical position while opening the right hand as in [Ill. 35].

(29) WEST: On the count of 36, at the same position and state, during a big exhalation, lower the hands to a horizontal position on the side of your body as in [Ill. 36]. Breathe normally.

(30) WEST: On the count of 37, from this position and state, during long inhalation [*chōkyū*] move the right foot forward while turning backwards (east) take the position of *hidari eji-dachi* as in [Ill. 37]. Simultaneously put your left hand on the right shoulder and stretch forward your right hand as *soe-te*. The body facing east in *hidari eji-dachi*.

(31) EAST: On the count of 38, in the same position, during a short exhalation, take the position of *hidari gedan-gamae* as in [Ill. 38]. The body facing east in *hidari eji-dachi*, right hand as *hikite*. (Elapsed time: 2 min)

- (32) EAST: On the count of 39, during inhalation bend the left elbow and turn the left hand to the centre and stretch the right hand out under the left as in [Ill. 39], so that the wrists are being crossed. Left hand on top of the right hand.
- (33) SOUTH: On the count of 40, then hold the breath and turn both hands outwards at the same time as you let the upper part of the body fall forward and move the inhaled air to the back of your head. Let both hands and the left knee be in contact with the floor and lift the right leg 45 degrees as in [Ill. 40]. Pinch the fingers together. (*Taiki jōtan*)
- (34) SOUTH: On the count of 41, from this position move the right leg down and back and simultaneously put your left hand on the right shoulder and stretch your right hand forward as *soe-te* as in [Ill. 41]. The body facing east in *hidari eji-dachi*.
- (35) EAST: On the count of 42, at the same position, during exhalation take the position of *hidari gedan-gamae* as in [Ill. 42]. The body facing east in *hidari eji-dachi*, right hand as *hikite*.

- (36) SOUTH: Inhale. On the count of 43, from this position and state, while pulling the left hand in to the position of *hikite* move the right foot one step forward. Simultaneously move the upper half of the body forward as in [Ill. 43] (about 15-20 degrees) and punch with both hands while doing *Ki-ai*. Support the fist of the right hand (below) with the palm of the left hand (above). (*Kyūki-haibatsu*)
- (37) SOUTH: On the count of 44, on the spot, pull back the upper half of the body and the abdomen, as if you let *ki* out of the back (backwards), back to the position shown in [Ill. 44]. (*Kyūki-haibatsu*)
- (38) SOUTH: On the count of 45, on the spot, move the pull-backed-abdomen forward, back to the initial position shown in [Ill. 45]. (*Kyūki-haibatsu*)

- (39) EAST: On the count of 46, in the same position turn the body to the left (west) during a long inhalation (*chōkyū*), so that you take the position of *hidari eji-dachi*. Simultaneously, put your left hand on the right shoulder and stretch forward your right hand as *soe-te*, as [Ill. 46]. The body facing west in *hidari eji-dachi*.
- (40) WEST: On the count of 47, in the same position, during a long exhalation (*chōto*), take the position of *hidari gedan-gamae* as in [Ill. 47]. The body facing west in *hidari eji-dachi*, right hand as *hikite*.
- (41) WEST: On the count of 48, in the same position, during inhalation pull the left hand in to the position for *hikite* and at the same time pull in the left leg so that you stand on both knees. During exhale, lower the hands and sit down in *seiza* with the right big toe on top of the left as in [Ill. 48]. Breathe normally. (Elapsed time: 2 min 30 sec)

(42) – (82) <Opposite side>

Do the other side (opposite) as done in steps 3 to 41(illustrations 1 to 48.)

8 Katsume no Hokei

1. COMPOSITION AND CONTENT OF HOKEI

Katsume no Hokei is one of the three (3) -*mei hokei*: *Sei*-, *Katsu*-, and *En*-. Its structure and content are as follows.

1. Compared with *Seimei no Hokei* this has a more technical content.
2. The content includes for techniques important *aji-dachi*, *kō-kutsu-dachi*, *ryūnen-dachi*, so called three stances and the three kamae: *Gedan*, *Chūdan* and *Jōdan*. The nine breathing methods used in *Seimei no Hokei* are used with *Sen*-, *Un*-, *Hen*-, *Nen*- and *Ten*-techniques. Moreover, *Uke* (blocks) against hand or foot techniques used in -*sei hokei*s are also included.
3. For blocking or attacking techniques, left and right hands are clenched and opened alternately. Focusing on finger moves like these will promote anti-aging.

2. SEQUENCE AND MOVEMENTS

- (1) EAST: Stand in *heisoku-dachi* on *kidō-ten* [Picture 1]. Sit in *seiza* in a set manner [Picture 2]. Sitting facing east.
- (2) EAST: Follow the set manner to do *zarei* [Picture 3].

East is where you are facing when starting a hokei.

9 Enmei no Hokei

1. COMPOSITION AND CONTENT OF HOKEI

Enmei no Hokei is one of the three (3) *-mei hokei*: *Sei*-, *Katsu*-, and *En*-. Its structure and content are as follows.

1. A seed is sown in the ground in the grand nature of the universe. Roots grow down, branches grow out, the trunk is getting taller and the tree grows thick. Over a long time, the tree endures blizzards, forming its original shape. Eventually the growth comes to an end and the tree starts to wither to finally return to the ground. The ecological phenomenon of that kind of life is expressed by superimposing it to the life of man.
2. This hokei is created to contain, except for pure technical elements, gymnastic elements and their effects on the whole human body, and further methods to elevate these techniques by utilizing the nine breathing methods. That is, it combines the outer effects to deal with an enemy and inner effects to keep one healthy. This hokei helps to truly protect one's life.

2. SEQUENCE AND MOVEMENTS

- (1) EAST: Stand in *heisoku-dachi* on *kidō-ten* [Picture 1]. Sit in *seiza* in a set manner [Picture 2]. Sitting facing east.
- (2) EAST: Follow the set manner to do *zareai* [Picture 3].

East is where you are facing when starting a hokei.

Picture 1

Picture 2

Picture 3

- (3) EAST: Pull both hands to the position of *hikite*. While opening the left hand, right hand remains as a fist, stretch out both hands 45 degrees upwards [Picture 4]. (The knuckle of the middle finger or the clenched right-hand rests in the cavity of left hand's palm.) Continue moving the arms upwards above the head while open the fist of the right hand [Picture 5].
- (4) EAST: While lifting the hip a bit, lower the arms to horizontal position on the sides of your body [Picture 6]. (*Muki-yūtai*).

10 Ingen no Hokei

1. STRUCTURE AND CONTENT OF HOKEI

The 18 hokei in Taido are divided into *-tai/-in*, *-sei*, *-mei* and *-gen no hokei*, and this *Ingen no hokei* together with *Yōgen no hokei* synthesize *-tai/-in* and *-sei* hokeis with the following content.

1. The timing of attack mainly practiced in this hokei is *sen no sen*, but also *tai no sen* and *go no sen* are present. Especially like the steps 50-52, making it look like you are chasing then while pulling the leg back check the opponent. Continuing with a *gyaku-zuki* or other high-level techniques.
2. Performing these moves artistically while making them technically efficient.
3. Expressions should not only be made technically, but also with a calm mind, composed and with flavour.
4. The time it should take to perform this hokei is 3 min 20 sec, which is relatively long. However, by combining hand moves with breathing methods, the hokei can be performed without causing excessive fatigue.
5. A *Sōkyoku* (a song played on the *Koto* and other traditional instruments) was made to go with the performance of this hokei making it even more artistic.
6. Additional comment: The first half of this hokei is like *Senin no hokei*.
